

Q. Calculator has price and company name.
 Calculator has many operations
 (eg, addition, sub, mul, div) which
 accepts two numbers from user
 and display its result on screen
 or console.

→

```
class Calculator {
```

```
    int price = 1050;
```

```
    String cname = "Casio";
```

```
    void operation addTwo (int n1, int n2) {
```

```
        int n3 = n1 + n2;
```

```
        System.out.println ("Addition=" + n3);
```

```
    }
```

```
    void subTwo (int n1, int n2) {
```

```
        int n3 = n1 - n2;
```

```
        System.out.println ("Subtraction=" + n3);
```

```
    }
```

```
    void mulTwo (int n1, int n2) {
```

```
        int n3 = n1 * n2;
```

```
        System.out.println ("mul=" + n3);
```

```
    }
```

```
void divtwo (int n1, int n2) {
```

```
    int n3 = n1 / n2;
```

```
    System.out.println ("Division=" + n3);
```

```
}
```

```
}
```
